Technology

Works Without
Internet

Features

Facial Recognition Based

Facial verification of employees using office device or their own mobile phone camera.

Instant Alerts

Employees' physical location tracked on a real time basis and presence of unwanted visitors triggers alerts.

Analytics Dashboard

Easy to use, real time, dashboards can be accessed on mobile, PCs and laptops.

Expense Management

Component that allows users to input, track, and manage their expenses.

Geo-fencing Feature

Field staff can log in only from one or more locations assigned to them.

Route Mapping

The display of the route map and the tracking of kilometers.

Live Tracking

Supervisors can monitor employee movements real time. Helps drive discipline, punctuality & regularity.

Supervisory control

Check-in employees when required. Regularise & approve employee adjustments.

Field Reports

Get automated end of day reports with visual map field staff travel.

How it works

1

Register Yourself

Enter your details and register yourself.

The registration screen shows a progress bar at the top with three steps: 1. Info, 2. Image, and 3. Preview. Below the progress bar, there are three headshot images. Underneath, the 'Registration Details' section includes fields for Name (Gauri), Last name (Upasane), Employee ID (1234), Phone number (8399718189), Email ID (gauripravin@gmail.com), and Department. At the bottom, there are 'Back' and 'Complete' buttons.

2

Clock in & Clock Out

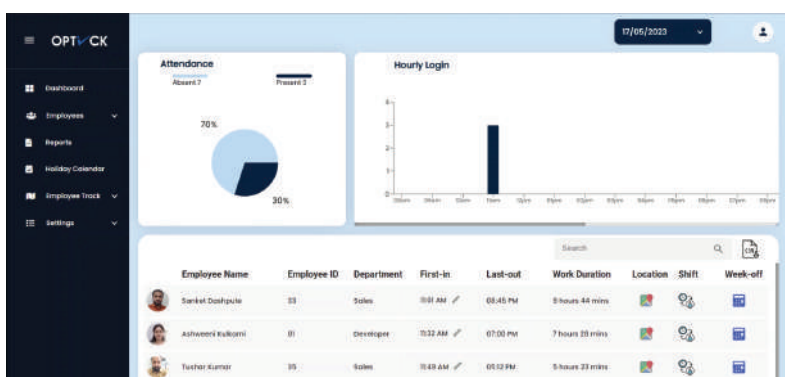

Employees can clock in and clock out using mobile.

3

Live tracking of field staff

Track employees live location.

View detailed attendance reports

Route Mapping

Display of route map and kilometers travelled.

Voice Notes

Field staff can attach voice notes or any other files.

Supervisor control

Face based attendance of employee can be marked by supervisor.

Virtual Fence

Supervisor received SMS when employee steps out of set range.

Best in class

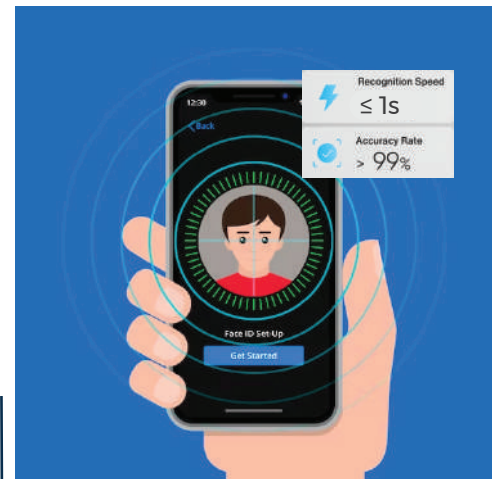

Higher Accuracy

OPTICK deep learning algorithm for face recognition increases recognition accuracy, compared against traditional algorithms. With higher accuracy comes better efficiency and a increased user experience.

Better Recognition Speed

The OPTICK Face Recognition can reach an amazing recognition speed of ≤ 1 seconds, making them ideal options for rush hour usage in companies scenarios where access for large numbers of people is required.

Recognition Under Low-light Situations

The OPTICK Face Recognition perform equally well under low light environments.
